

Power BI Dashboard – Brief Explanation

1. Count of Order ID = 3

- This card shows the total number of Order IDs available in the selected data.
- It helps users know how many orders are included in the report.

2. Average Profit by Category = 316.90

- This KPI displays the average profit earned across different product categories.
- It is useful for measuring overall business performance.

3. Total Amount by Sub-Category = 431.50K

- This card shows the total sales amount generated from all sub-categories.
- It helps identify the overall revenue.

4. Total Month of Target = 435.90K

- This KPI displays the total sales target for the selected period.
- It can be compared with actual sales to measure achievement.

5. Total Quantity = 6K

- This card represents the total number of products sold.
- It helps analyze sales volume.

6. Total Profit = 112K

- This KPI shows the overall profit earned from all orders.
- A higher profit indicates better business performance.

Conclusion

- The dashboard summarizes important business metrics in a simple format.
- It provides quick insights into **Orders, Sales Amount, Target, Quantity, and Profit.**
- These KPIs help managers monitor performance and make data-driven decisions.
